Record the artworks on the wall - **Pin Board**

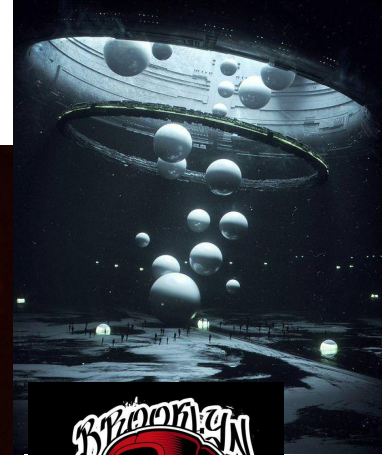

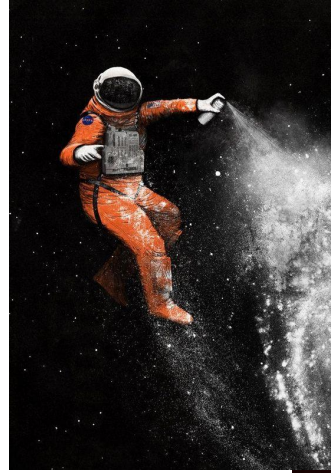

The purpose of this app is provide a way for people record and track the artworks on the wall that they met on the map. They could find out what kind of art pieces like graffiti or chalk drawing could be found on specific area.

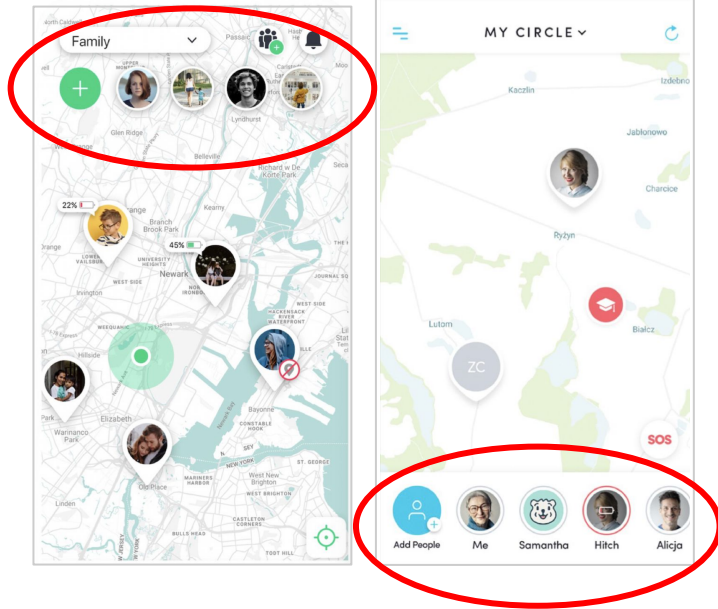

Using this app, people could create their own artworks' map, take photos and make a record it like writing their own diary or recording the journey of artwork.

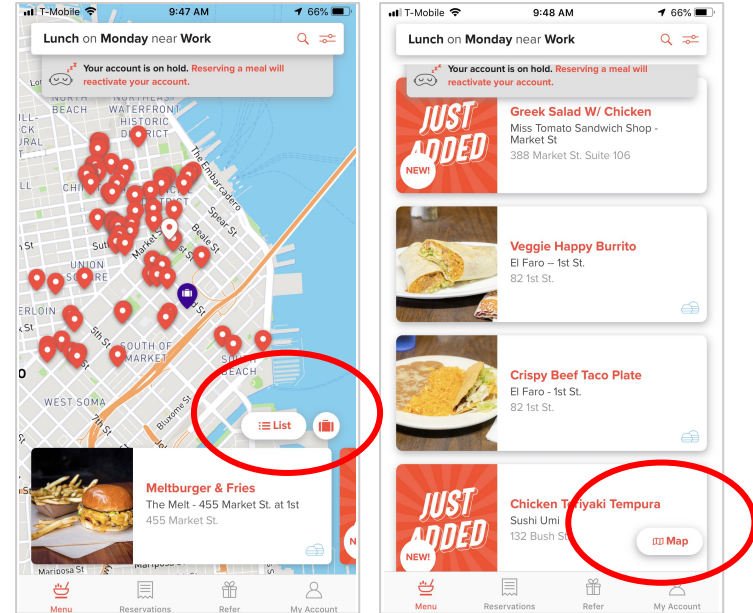

Mood Board

Inspiration Board

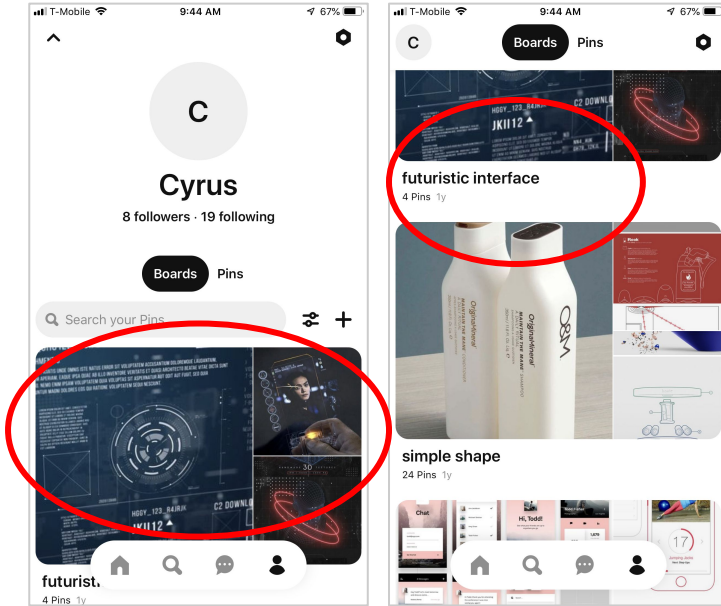

Putting the image inside the little circle and put it map is a good way to show the records of artworks.

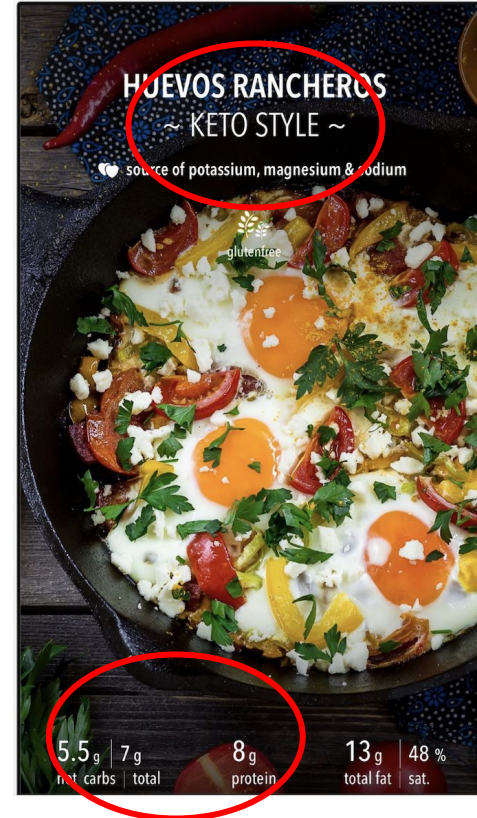

I like the way this app use List button and Map button to switch between map page and product list page.

Inspiration Board

I like the way they categorized the image they save and they can name the categories on their own.

Using the full screen size image as the background image of product file can let users feel the product more successfully.

The main color I chose for this app is a contrast color combination, which creates an impressive and minimalist feeling for app users. Other than those three basic black, grey and white colors, red would be used for some buttons and main position. Also, main color bring the app attitude. The red color brings people the feeling of fantasy and curiosity which would encourage users to enjoy the artworks and get inspiration from their records.
